## **ENVIRONMENTAL, OCCUPATIONAL HEALTH AND SAFETY POLICY**

People are an invaluable asset; the protection of our environment and safe guarding health and safety of our people are our greatest concern.

As a leader in the engineering field, we are aware that a quality product and environmental, health and safety are inseparable for continued success. It is our goal to create an environmental, health and safety awareness among our employees so that each individual understands that he or she has responsibility for implementation of environmental friendly and safe working practices. Unsafe working practices can lead to accidents which can affect others including those not in our employment, even in a safe work environment. It is our goal to eliminate unsafe working conditions, unsafe work practices and adverse environmental impacts.

### **It is AT's policy to:**

- Comply with all statutes, regulations, legislation and other requirements regarding environmental, health and safety.
- Take immediate action to correct or isolate unsafe working conditions or work practices.
- Promote environmental, health and safety awareness and hold each employee accountable for his or her personal safety.
- Take every reasonable effort to prevent injury and ill health to any person and minimizing adverse environmental impacts due to all our activities and services.
- Continual improvement of our environmental, health and safety performance on all activities and services.

Every reasonable effort will be made to ensure that employees can accomplish the safe completion of assigned tasks. No task is so important (nor so urgent) that we cannot take the time to do it safely.
